

## *ADS Proto Mobile Android Sideloading Instructions*

Hook your phone up to your computer with a syncing cable (likely Micro USB) and drag and drop file into the phone's storage. Since we'll need to find the file again, make sure you remember where you placed the APK on your phone. Usually, it's easiest to place the file in the root of your phone's storage, inside no folders. This will make finding the file easier later on, but it's not a great way to keep your phone's storage organized.

If you don't already have one, download a file manager app from the Google Play Store. Open the file manager, find the APK you placed in the storage, and tap on it. This should initiate the install.
